

LamaPLC: Eastron SDM 72

The Eastron SDM230 Modbus MID 3-phase kWh meter is ideal for the precise monitoring of, for example, a solar panel system, a charging station, a heat pump, or another 1-phase group of your choice. On the illuminated LCD screen, you can immediately see how many kWh the respective system consumes or produces, and it is used for official registration and billing of the measurement data. For example, if you want to bill a tenant for the electricity consumption of a specific room.

Convert word array to real array

The Input registers are in a word format and must be converted into real numbers in pairs. This conversion involves straightforward bit-level merging, which can be implemented in LabView, for example, as shown below:

32-bit (2 words) input registers

The registers are read-only. All values are 4-byte IEEE 754 float type.
